Author index of volume 54

(The issue number is given in front of the page number)

Azzi, M., *see* **Duc, H.** (1–3) 1–21
Billings, S.A., *see* **Liu, J.-J.** (6) 425–449
Boisvert, R.F. Mathematical software: past, present, and future (4–5) 227–241
Bölöni, L., *see* **Marinescu, D.C.** (4–5) 279–293
Bove, A., S. DeMartino and **G. Lauro,** Trend to equilibrium in the dynamics of a gas interacting with a radiation field (1–3) 113–129
Can, E., *see* **Fatullayev, A.** (1–3) 159–167
Chaitin-Chatelin, F., A. Harrabi and **A. Ilahi,** About Hölder condition numbers and the stratification diagram for defective eigenvalues (4–5) 397–402
Chang, H.-C., *see* **Liu, J.-J.** (6) 425–449
Chard, J.A. and **V. Shapiro,** A multivector data structure for differential forms and equations (1–3) 33–64
Cheng, S.-J., *see* **Liu, J.-J.** (6) 425–449
Chrisochoides, N. and **D. Nave,** Simultaneous mesh generation and partitioning for Delaunay meshes (4–5) 321–339
DeMartino, S., *see* **Bove, A.** (1–3) 113–129
Duc, H., I. Shannon and **M. Azzi,** Spatial distribution characteristics of some air pollutants in Sydney (1–3) 1–21
Dyksen, W.R. and **R.E. Lynch,** A new decoupling technique for the Hermite cubic collocation equations arising from boundary value problems (4–5) 359–372
Eigenmann, R. and **M.J. Voss,** Towards a compilation paradigm for computational applications on the information power grid (4–5) 307–320
Fatullayev, A. and **E. Can,** Numerical procedures for determining unknown source parameter in parabolic equations (1–3) 159–167
Ford, B., *see* **Trefethen, A.E.** (4–5) 259–268
Fox, G.C. From computational science to Internetics: Integration of science with computer science (4–5) 295–306
Frenkel, I.B., *see* **Labzovski, S.N.** (1–3) 183–188
Gautschi, W. Gauss–Radau formulae for Jacobi and Laguerre weight functions (4–5) 403–412
Ge, L., *see* **Zhang, J.** (1–3) 65–80
Golenko-Ginzburg, D. and **Z. Laslo,** Timing control points via simulation for production systems under random disturbances (6) 451–458
Gumel, A.B., E.H. Twizell and **P. Yu,** Numerical and bifurcation analyses for a population model of HIV chemotherapy (1–3) 169–181

PII: S0378-4754(00)00313-X

Harrabi, A., *see* **Chaitin-Chatelin, F.** (4–5) 397–402
Hirose, H. Maximum likelihood parameter estimation by model augmentation with applications to the extended four-parameter generalized gamma distribution (1–3) 81–97
Houstis, E.N. and **J.R. Rice,** Future problem solving environments for computational science (4–5) 243–257
Ilahi, A., *see* **Chaitin-Chatelin, F.** (4–5) 397–402
Janssen, M.A. Sequential optimization of integrated climate change models (6) 477–489
Jeang, Y.-L., *see* **Yang, C.-H.** (1–3) 23–32
Jon, G.-J., *see* **Yang, C.-H.** (1–3) 23–32
Kostic, D., *see* **Potkonjak, V.** (1–3) 145–157
Kouatchou, J. Parallel implementation of a high-order implicit collocation method for the heat equation (6) 509–519
Kouatchou, J., *see* **Zhang, J.** (1–3) 65–80
Koulisianis, M.D. and **T.S. Papatheodorou,** A 'moving index' method for the solution of the American options valuation problem (4–5) 373–381
Küchler, U. and **E. Platen,** Strong discrete time approximation of stochastic differential equations with time delay (1–3) 189–205
Kung, I.-C., *see* **Liu, J.-J.** (6) 425–449
Kurbanmuradov, O., Ü. Rannik, K. Sabelfeld and **T. Vesala,** Evaluation of mean concentration and fluxes in turbulent flows by Lagrangian stochastic models (6) 459–476
Labzovski, S.N., A. Mehrez and **I.B. Frenkel,** The a priori vacation probability in the M/G/1 single vacation models (1–3) 183–188
Laslo, Z., *see* **Golenko-Ginzburg, D.** (6) 451–458
Lauro, G., *see* **Bove, A.** (1–3) 113–129
Liu, J.-J., S.-J. Cheng, I.-C. Kung, H.-C. Chang and **S.A. Billings,** Non-linear system identification and fault diagnosis using a new GUI interpretation tool (6) 425–449
Luo, C.-H., *see* **Yang, C.-H.** (1–3) 23–32
Lynch, R.E., *see* **Dyksen, W.R.** (4–5) 359–372
Maistrenko, Y., *see* **Yanchuk, S.** (6) 491–508
Makroglou, A. Computer treatment of the integro-differential equations of collective non-ruin; the finite time case (1–3) 99–112
Marinescu, D.C. and **L. Bölöni,** A component-based architecture for problem solving environments (4–5) 279–293
Mehrez, A., *see* **Labzovski, S.N.** (1–3) 183–188
Mosekilde, E., *see* **Yanchuk, S.** (6) 491–508
Nave, D., *see* **Chrisochoides, N.** (4–5) 321–339
Oldehoeft, R. Taming complexity in high-performance computing (4–5) 341–357
Papatheodorou, T.S., *see* **Koulisianis, M.D.** (4–5) 373–381
Platen, E., *see* **Küchler, U.** (1–3) 189–205
Potkonjak, V., S. Tzafestas and **D. Kostic,** Concerning the primary and secondary objectives in robot task definition — the "learn from humans" principle (1–3) 145–157
Rannik, Ü., *see* **Kurbanmuradov, O.** (6) 459–476
Rice, J.R., *see* **Houstis, E.N.** (4–5) 243–257
Sabelfeld, K., *see* **Kurbanmuradov, O.** (6) 459–476
Schönauer, W. Numerical engineering: design of PDE black-box solvers (4–5) 269–277
Shannon, I., *see* **Duc, H.** (1–3) 1–21
Shapiro, V., *see* **Chard, J.A.** (1–3) 33–64
Snyder, W.C. Accuracy estimation for quasi-Monte Carlo simulations (1–3) 131–143

Trefethen, A.E. and **B. Ford,** Numerical algorithm delivery mechanisms (4–5) 259–268
Twizell, E.H., *see* **Gumel, A.B.** (1–3) 169–181
Tzafestas, S., *see* **Potkonjak, V.** (1–3) 145–157
Vesala, T., *see* **Kurbanmuradov, O.** (6) 459–476
Voss, M.J., *see* **Eigenmann, R.** (4–5) 307–320
Yanchuk, S., Y. Maistrenko and **E. Mosekilde,** Partial synchronization and clustering in a system of diffusively coupled chaotic oscillators (6) 491–508
Yang, C.-H., C.-H. Luo, Y.-L. Jeang and **G.-J. Jon,** A novel approach to adaptive Morse code recognition for disabled persons (1–3) 23–32
Yang, D. Finite elements for elliptic problems with wild coefficients (4–5) 383–395
Yu, P., *see* **Gumel, A.B.** (1–3) 169–181
Zhang, J., L. Ge and **J. Kouatchou,** A two colorable fourth-order compact difference scheme and parallel iterative solution of the 3D convection diffusion equation (1–3) 65–80
